

Eastern Rhodopes Nestos Evros And Dadia Bulgaria

As recognized, adventure as skillfully as experience virtually lesson, amusement, as well as treaty can be gotten by just checking out a books **Eastern Rhodopes Nestos Evros And Dadia Bulgaria** as a consequence it is not directly done, you could give a positive response even more all but this life, around the world.

We offer you this proper as well as simple pretension to acquire those all. We give Eastern Rhodopes Nestos Evros And Dadia Bulgaria and numerous book collections from fictions to scientific research in any way. in the midst of them is this Eastern Rhodopes Nestos Evros And Dadia Bulgaria that can be your partner.

Aspects of Multilingualism in European Border Regions

Commission of European Opean Communities
Based on the bestselling book, Rivers of North America, this new guide stands as the only primary source of complete and comparative baseline data on the biological and hydrological characteristics of more than 180 of the highest profile rivers in Europe. With numerous full-color photographs and maps, Rivers of Europe includes conservation information on current patterns of river use and the extent to which human society has exploited and impacted them. Rivers of Europe provides the information ecologists and conservation managers need to better assess their management and meet the EU legislative good governance targets. Coverage on more than 180 European rivers Summarizes biological, ecological and biodiversity characteristics Provides conservation managers with information to resolve conflicts between recreational use of rivers, their use as a water supply, and the need to conserve natural habitats Data on river hydrology (maximum , minimum and average flow rates), seasonal variation in water flow Numerous full-color photographs Information on the underlying geology and its affect on river behaviour
Greece BRILL

This book integrates the different prospective, scientific and practical experience of researchers as well as beneficiaries and stakeholders in the field of forest conservation in Southeast Europe. The book stresses the importance of improving the adaptability of these ecosystems to the impacts of climate change. Gathered around a common idea, the book presents the latest results in forest genetic resources conservation at national and regional level. The chapters are written by experts from: Bosnia and Herzegovina, Bulgaria, Croatia, FYR Macedonia, Greece, Montenegro, Romania, Serbia and Slovenia. The book presents the current state, legal and institutional

framework for conservation and management of forest genetic resources, case studies and best practices in the application of different conservation methods and techniques (in situ and ex situ) as well as climate change aspects in this area. This book will be of particular interest to scientists and experts in the field of forestry, environmental protection and rural development, bachelor, master and doctoral students, as well as for anyone interested in the conservation issues fuelled by ethical and economic motives.

Eastern Europe Geological Society of London

Quaternary Paleoenvironments examines the drowned landscapes exposed as extensive and attractive territory for prehistoric human settlement during the Ice Ages of the Pleistocene, when sea levels dropped to 120m-135m below their current levels. This volume provides an overview of the geological, geomorphological, climatic and sea-level history of the European continental shelf as a whole, as well as a series of detailed regional reviews for each of the major sea basins. The nature and variable attractions of the landscapes and resources available for human exploitation are examined, as are the conditions under which archaeological sites and landscape features are likely to have been preserved, destroyed or buried by sediment during sea-level rise. The authors also discuss the extent to which we can predict where to look for drowned landscapes with the greatest chance of success, with frequent reference to examples of preserved prehistoric sites in different submerged environments. Quaternary Paleoenvironments will be of interest to archaeologists, geologists, marine scientists, palaeoanthropologists, cultural heritage managers, geographers, and all those with an interest in the drowned landscapes of the continental shelf.
Geo-data CRC Press

A contemporary analysis of the people, cultures, and society within the regions that make up Eastern Europe. Eastern Europe: An Introduction to the People, Lands, and Culture sheds light on modern-

day life in the 16 nations comprising Eastern Europe. Going beyond the history and politics already well documented in other works, this unique three-volume series explores the social and cultural aspects of a region often ignored in books and curricula on Western civilization. The volumes are organized by geographic proximity and commonality in historical development, allowing the countries to be both studied individually and juxtaposed against others in the region. The first volume covers the northern tier of states, the second looks at lands that were once part of the Hapsburg empire, and the third examines the Balkan states. Each chapter profiles a single country--its geography, history, political development, economy, and culture--and gives readers a glimpse of the challenges that lie ahead. Vignettes on various topics of interest illuminate the unique character of each country. Discusses the geography, history, political development, and economy of nations such as Poland, Lithuania, Slovakia, Hungary, Serbia, Albania, and many others Includes historical profiles of significant people such as Konstantin Päts and Lydia Koidula, cultural events such as the Song Festival, and key events such as the sinking of the ferry Estonia Presents maps of the entire region and each of the 16 countries, including Latvia, Slovenia, Bulgaria, and Greece Includes discussions of Eastern European languages
Beginnings of metallurgy in the old world John Wiley & Sons
At the height of the Greek Civil War in 1948, 38,000 children were evacuated from their homes in the mountains of northern Greece and relocated to orphanages and children's homes. This book analyses the evacuation, which remains a controversial issue within Greek society.

Eastern Rhodopes University of Chicago Press

The Eastern Rhodopes are a region in southeastern Bulgaria where a huge historical, cultural and natural heritage has been preserved and awaits to be discovered by curious travellers. The guidebook includes all significant tourist attractions in the Eastern Rhodopes and

gives ideas and describes routes for active holidays.

Rivers of Europe Springer Nature

A popular series of guidebooks for the modern-day traveler offering information on cities and countries around the world continues, presenting up-to-date backgrounds and descriptions, detailed maps, hundreds of photographs and much more, including walking and driving tours, visitor information directories and cultural sidebars. Original.

Portrait of the Regions: Portugal, Spain, Italy, Greece Gale Cengage

A new study of the international and local politics surrounding the Muslim minority of Western Thrace (Greece) in the 1940s, based on previously unseen archival material. Addresses the minority's complex identity, its relations with other communities in the area, the international diplomacy of WWII and strategic considerations of the Cold War.

The Last Ottomans Accademia Europea di Bolzano

Sea-level change has influenced human population globally since prehistoric times.

Even in early phases of cultural development human populations were faced with marine regression and transgression as a result of changing climate and corresponding glacio-isostatic adjustment. Global marine regression during the last glaciation changed the palaeogeography of the continental shelf, converting former marine environments to attractive terrestrial habitats for prehistoric humans. These areas of the shelf were used as hunting and gathering areas, as migration routes between continents, and most probably witnessed the earliest developments in seafaring and marine exploitation, until the postglacial transgression re-submerged these palaeo-landscapes. Based on modern marine research technologies and the integration of large databases, proxy data are increasingly available for the reconstruction of Quaternary submerged landscapes. Also, prehistoric archaeological remains from the recent sea bottom are shedding new light on human prehistoric development driven by rapidly changing climate and environment. This publication contributes to the exchange of ideas and new results in this young and challenging field of underwater palaeoenvironmental investigation. Submerged Landscapes of the European Continental Shelf BRILL

The Iron Curtain, running from the Barents Sea to the Black Sea, divided Europe for almost 40 years and no activity was allowed in this "forbidden" zone. When it fell in 1989, it left a strip of land that runs the entire length of Europe and that has remained comparatively undisturbed – a green belt. The Green Belt initiative aims to integrate this entire strip of land with its key habitats and ecological areas as part of an international network of valuable ecosystems. This book provides background information on the initiative, reviews current activities in a number of case studies and looks at how the initiative can fit into current and future global efforts to protect European biodiversity.

Greece Springer

This volume is the final document of the 1st Balkan Botanical Congress and comprises after reviewing the full texts of the Congress Lectures submitted by their authors. The articles refer to all branches of plant sciences in the field of pure and applied research. The subjects dealt with in the Congress, and each representing a separate section in this book covered the following areas of interest: I. Taxonomy, geobotany and evolution II. Biochemistry, metabolism and bioenergetics III. Ecology and ecophysiology IV. Structure and its dynamics V. Genetics, plant breeding and

biotechnology VI. Growth, development and differentiation. The Congress was organized by the Department of Botany, Aristotle University of Thessaloniki and the Hellenic Botanical Society. The city of Thessaloniki was chosen by the Organizers since it enjoyed the accolade of the "cultural capital of Europe" for the year 1997. The Thessaloniki Congress has taken on the character of an International Congress since 320 scientists, mainly from the Balkan countries and the rest of Europe (26 countries in all) took part in it. The 11 invited speakers who shared their experience with us, were well-known specialists from all the European countries.

Skill Needs and Shortages in the Region of Eastern Macedonia and Thrace in Greece Springer Science & Business Media

The book focuses on the management of the aquatic environment. It is aimed at scientists, students, governmental officials and specialists dealing with groundwater and environment. Its main goal is to inform the reader of ideas, knowledge and experience in terms of a sustainable aquatic environment. The main topics are as follows: Water Bodies and Ecosystems; Climate Change and Water Bodies; Water quality and agriculture; Interaction of Surface and ground waters; Karst Hydrogeology; Continuous Media Hydrogeology; Fissured Rocks Hydrogeology; Hydrochemistry; Geothermics and thermal waters; The role of water in construction projects; Hydrology

Bulletin Springer

Volume 1 covers: Austria, Belarus, Belgium, Czech Republic, Denmark, Greenland, Estonia, Finland, Germany, Scotland, Latvia, Liechtenstein, Lithuania, Luxembourg, Netherlands, Norway, Faroe Islands, Svalbard, Poland, Republic of Ireland, Russia, Slovakia, Sweden, Switzerland, United Kingdom.

Conservation of Architectural Heritage (CAH) Oxbow Books Limited

Subsistence practices are frequently argued to have been important factors in the Neolithic-Bronze Age transition, although all too often very little systematic research has provided any empirical data on which to base such arguments.

Advances in the Research of Aquatic Environment National Geographic Books

This volume focuses on Muslims in Finland, Greece, Ireland and Portugal. It highlights how Muslim experiences can be understood in relation to country's particular historical routes, political economies, and post-colonial legacies. It also reveals that country particularities

shaping European Muslim experiences cannot be understood independently of global dynamics.

Bulgaria-Romania Boundary Taylor & Francis

A descriptive reference to the countries, continents and oceans of the world. The first part profiles the physical environment of 204 nations and territories, describing the terrain, landforms, topographical regions, mountains and rivers. The second part presents information on continents, climate and maritime features such as oceans, seas and gulfs. Also included are rankings of major geographical features, sources, and 204 country maps.

Geothermal Systems and Energy Resources Springer Science & Business Media

The Atlas of the Hoverflies of Greece is a concise presentation of all 418 hoverfly species for Greece known so far. The species are documented with photos and distribution GIS-maps and they are preceded by a general introduction on hoverflies and Greek nature, and a generic key.

Geology and Archaeology ABC-CLIO

"The writing is superb... each (Nelles) guide is delightfully comprehensive, a solid source of reliable information for the traveller... All travel guides claim to be comprehensive, but we found Nelles Guides superior". -- Arizona Senior World

"(The Nelles Guides are) . . . beautifully photographed . . . the maps are better than Insight's, and practical information is integrated with the text, not relegated to the end". -- National Geographic Traveller - Quality writing, often by native writers -- Detailed sections on the history, culture, special features and festivals -- Accommodations, restaurant guides, sights to see, places to shop, how to get around

Muslims at the Margins of Europe Nelles Verlag

In the region comprising Turkey and Greece, people have been using water from geothermal sources for bathing and washing of clothes since ancient times.

This region falls within the Alpine-Himalayan orogenic belt and hence is a locus of active volcanism and tectonism and experiences frequent seismic events.

This volcanic and tectonic activity has given rise to over 1500 geothermal springs. Its importance was recognized decades ago and the geothermal water is now being utilized for district heating, industrial processing, domestic water supply, balneology and electric power generation. The geothermal potential in this region is large. In Turkey alone it is estimated to be more than 31500 MWt while the proven potential is 4078 MWt. At present 2084 MWt is being utilized for direct applications in Turkey and 135 MWt in Greece. In Turkey electricity is produced for 166 MW installed capacity, whereas in Greece geothermal energy is presently not

used for electricity production despite its potential. This book discusses the geochemical evolution of the thermal waters and thermal gases in terms of the current volcano-tectonic setting and associated geological framework that makes the region very important to the geothermal scientific community. The book explains, in a didactic way, the possible applications, depending on local conditions and scales, and it presents new and stimulating ideas for future developments of this renewable energy source. Additionally, the book discusses the role(s) of possible physicochemical processes in deep hydrothermal systems, the volatile provenance and relative contributions of mantle and crustal components to total volatile inventories. It provides the reader with a thorough understanding of the geothermal systems of this region and identifies the most suitable solutions for specific tasks and needs elsewhere in the world. It is the first time that abundant information and data from this region, obtained from intensive research during the last few decades, is unveiled to the international geothermal community. Thus, an international readership, in the professional and academic sectors, as well as in key institutions that deal with geothermal energy, will benefit from the knowledge from geothermal research and experiences obtained from the Aegean Region.
