Con este nuevo libro pretendemos contribuir a la orientación del aprendizaje acerca de las características moleculares de las células y la comprensión de las modificaciones que estas sufren en su interacción con el entorno; asimismo, ofrecer una guía para que los estudiantes que comienzan sus aprendizajes en la educación superior y particularmente en la Bioquímica, logren comprender los conceptos relacionados con la estructura y la función de las principales biomoléculas encargadas de la vida celular. La comprensión teórica de los conceptos está directamente relacionada con su aplicación práctica, de tal forma que se ha establecido una serie de orientaciones para su abordaje experimental, buscando con ello que los estudiantes desarrollen sus capacidades de análisis, discusión y desempeño en el ámbito experimental. El estudio consecuente y comprometido de estas orientaciones se convertirá en una excelente herramienta para el aprendizaje con comprensión de la relación entre la estructura y función de las biomoléculas que hacen posible la vida en nuestro planeta.

Celiac disease is a systemic autoimmune process and appears in genetically predisposed individuals, with a well-known cause, consisting in a permanent intolerance to gluten, a protein contained in the flour of wheat, rye, barley and oats. Worldwide celiac disease affects to 1% of the Caucasian and there is recent evidence that the disease is increasing in USA and Finland among other regions in the world. It is considered to be the most prevalent disease with a genetic predisposition. The clinical forms of presentation are varied. The classical form consisting of diarrhea, anemia and failure to thrive is still common in children, but in the adult patients the symptoms resemble the irritable bowel syndrome. Mono-symptomatic forms with extra-intestinal manifestations are frequent. Hematological, cutaneous, articular, hepatic, bone and neurological manifestations are often described. This protean presentation and the lack of awareness explain the delay in diagnosis and suggest that screening in high-risk groups is indicated. The publication of this book written mainly by Spanish and Latin-American clinicians, researchers, and teachers, demonstrates the wide interest and the involvement of different disciplines that are necessary to understand celiac disease and gluten-related pathologies, such as non-celiac gluten-sensitivity. This has a great impact in the general public and in the industry. However, the knowledge of non-celiac gluten-related pathologies remains scarce but presently in the process of being properly defined. This book also highlights the importance of recognizing non-celiac gluten-sensitivity and briefly discusses a new definition. It also provides some perspectives to take into account when studying celiac disease in China and Central America. It describes new observations in Mexico, El Salvador and Costa Rica. The psychosocial impact as studied and reported by Argentinean investigators also adds to the value of this book. Written with a multidisciplinary team, we think that this book could be of interest to a great variety of medical specialists. Due to the systemic nature and variable presentation of celiac disease it certainly is of interest to pediatricians, gastroenterologists, hepatologists, specialists in internal medicine, general practitioners as well as hematologists, immunologists, geneticists, pathologists, rheumatologists, dermatologists, neurologists, gynecologists, neurologists, psychiatrists, psychologists, orthopedic surgeons, specialists in rehabilitation medicine, endocrinologists. Being gluten the cause of these disorders, the food industry, dietitians and nutritionists will benefit from the valuable information presented in this book.

"This core textbook helps medical students bridge the gap between biochemistry, physiology, and clinical care. The strength of Mark's Basic Medical Biochemistry is that it starts with the patient--the metabolic and nutritional needs of the human body (easy for students to understand)--as opposed to explanations of complex chemical theory. Mark's Basic emphasizes clinical correlations throughout the text and links biochemical concepts to physiology and pathophysiology, using patient vignettes as the context. These specific and memorable mock patient cases are followed throughout the chapter to pose questions, illustrate core concepts, and help students remember and apply biochemical principles within the context of clinical practice"--Provided by publisher.

More than ten years ago, the faculty members of the Department of Pharmacology at the University of Oklahoma College of Medicine developed a review book of medical pharmacology in response to requests from our second year medical students who were preparing to sit for the Part I examination of the National Board of Medical Examiners. The students expressed a need for an organized approach to cope with the volume of basic science curricular material presented during the first two years. Therefore, our review book was not designed to provide a comprehensive text on pharmacology, but rather to provide the students with a significant core of information, as a refresher, after they had successfully completed a basic course in pharmacology. This book represents a major revision of our review of medical pharmacology. The book has been reorganized, updated and expanded to provide current information on major new drugs and information on older drug groups that typically are covered on licensure examinations. The book also has been expanded to include a large number of new questions for self-examination. The faculty have endeavored to retain a reasonably concise, relevant and readable review book that will provide the students with a thorough review of pharmacology. Students are advised to refer to comprehensive textbooks, as needed, to fill in any gaps in their knowledge which may be disclosed by the self-examinations.

Lippincott's Illustrated Review of Biochemistry - Indian Edition Elsevier Health Sciences

Entre las implicaciones que supone la adaptación de las actuales titulaciones al Espacio Europeo de Educación Superior (EEES) destaca el diseño de guías docentes para las asignaturas basadas en competencias y objetivos de aprendizaje. Este hecho, afecta tanto a las metodologías de enseñanza-aprendizaje necesarias para la adquisición de dichas competencias, como al sistema de evaluación de las mismas. Por ello, con objeto de adaptar la enseñanza en las universidades españolas a este

nuevo espacio, es necesario reflexionar sobre algunas cuestiones relacionadas con los cambios metodológicos y de evaluación. El libro que se presenta supone una innovación respecto a los tradicionalmente utilizados para el estudio del "Análisis Instrumental", ya que con él se apuesta por un modelo de aprendizaje centrado en el alumno y una formación basada en competencias. De esta forma, el libro ha sido concebido para ofrecer al estudiante y al profesor materiales y recursos que permitan la enseñanza-aprendizaje de esta materia en el nuevo marco del EEES. Las actividades presentadas están encaminadas al desarrollo-evaluación de competencias genéricas especialmente valoradas en estudiantes de Grados Científico-Tecnológicos, favoreciéndose el aprendizaje autónomo por parte del mismo así como su participación activa en el desarrollo de la asignatura.
