I want theatre to be sweaty, exciting, unpredictable.... Mike Bradwell is on a mission to revolutionise British theatre. He's sick of fancy plays by dead blokes and wants to tell stories about real people, living real lives. And it doesn't get more real than Hull. In a freezing cold house on Coltman Street, a motley crew of unemployed actors gather to improvise a play with no name, no plot, no budget and no bookings. Richard Bean's (The Hypocrite, One Man, Two Guvnors) hilarious and irreverent comedy takes us back to the 70s and Hull Truck Theatre's origin story. It is a roaring combination of comedy, cabaret, farce and drama. Join us for a celebration of where it all began... This edition was published to coincide with the world premiere at Hull Truck Theatre in February 2022.

This book develops a constitutional theory of international organization to explain the legitimation of supranational organizations. Supranational organizations play a key role in contemporary global governance, but recent events like Brexit and the threat by South Africa to withdraw from the International Criminal Court suggest that their legitimacy continues to generate contentious debates in many countries. Rethinking international organization as a constitutional problem, Oates argues that it is the representation of the constituent power of a constitutional order, that is, the collective subject in whose name authority is wielded, which explains the legitimation of supranational authority. Comparing the cases of the European Union, the World Trade Organization, and the International Criminal Court, Oates shows that the constitution of supranationalism is far from a functional response to the pressures of interdependence but a value-laden struggle to define the proper subject of global governance. The book will be of interest to students and scholars of international organization and those working in the broader fields of global governance and general International Relations theory. It should also be of interest to international legal scholars, particularly those focused on questions related to global constitutionalism.

This book is a complete introduction to the power of R for marketing research practitioners. The text describes statistical models from a conceptual point of view with a minimal amount of mathematics, presuming only an introductory knowledge of statistics. Hands-on chapters accelerate the learning curve by asking readers to interact with R from the beginning. Core topics include the R language, basic statistics, linear modeling, and data visualization, which is presented throughout as an integral part of analysis. Later chapters cover more advanced topics yet are intended to be approachable for all analysts. These sections examine logistic regression, customer segmentation, hierarchical linear modeling, market basket analysis, structural equation modeling, and conjoint analysis in R. The text uniquely presents Bayesian models with a minimally complex approach, demonstrating and explaining Bayesian methods alongside traditional analyses for analysis of variance, linear models, and metric and choice-based conjoint analysis. With its emphasis on data visualization, model assessment, and development of statistical intuition, this book provides guidance for any analyst looking to develop or improve skills in R for marketing applications.

In this electrifyingly fierce and funny social satire— a gender-flipped reboot of the iconic 1970's film "Taxi Driver"—a ride share driver is barely holding it together on the hunt for love, dignity and financial security . . . until she decides she's done waiting. "A ferocious new voice. A fierce and

immersive debut." —Weike Wang, author of *Joan is Okay* and *Chemistry* Damani is tired. Her father just died on the job at a fast food joint, and now she lives paycheck to paycheck in a basement, caring for her mom and driving for an app that is constantly cutting her take. The city is roiling in protests --everybody's in solidarity with somebody-- but while she keeps hearing that they're fighting for change on behalf of people like her, she literally can't afford to pay attention. Then she gives a ride to Jolene (5 stars, obviously). Jolene seems like she could be the perfect girlfriend - attentive, attractive, an ally - and their chemistry is off the charts. Jolene's done the reading, she goes to every protest, and she says all the right things. So maybe Damani can look past the one thing that's holding her back: She's never dated anyone with money before, not to mention a white girl with money. But just as their romance intensifies and Damani finally lets her guard down, Jolene does something unforgivable, setting off an explosive chain of events. A wild, one-sitting read brimming with dark comedy, and piercing social commentary and announcing Priya Guns' feverishly original voice, *Your Driver Is Waiting* is a crackling send-up of our culture of modern alienation.

Bacterial Energetics deals with bacterial energetics and the molecular basis of how ions move between and within energy-transducing molecules. Topics covered range from respiration-driven proton pumps and primary sodium pumps to light-driven primary ionic pumps, bacterial transport ATPases, and bacterial photosynthesis. Sodium-coupled cotransport and ion-exchange systems in prokaryotes are also considered. This volume is comprised of 17 chapters and begins with an analysis of the pumps and processes that establish electrochemical ion gradients across bacterial membranes, followed by a discussion on the major types of bioenergetic work that utilize these gradients. The energetics of periplasmic transport systems, chemolithotrophs, methanogens, and protein insertion and translocation into or across membranes are also examined, along with bioenergetics in extreme environments such as high-pressure and high-temperature environments;

energetic problems of bacterial fermentations; energetics of bacterial motility; and energetics of the bacterial phosphotransferase system in sugar transport and the regulation of carbon metabolism. This book should be of interest to molecular biologists and biochemists.
