Proceedings of The International Conference on eBusiness, eCommerce, eManagement, eLearning and eGovernance 2015 Cengage Learning
Managing business processes must be a priority for organizations that want to be innovative and profitable. But despite their importance, many public and private organisations delegate the managing of process projects to information technology specialists who may not know what's truly best for the business. Richard Stoneham, managing director of Business Processes Australia, argues that business leaders need to lead process programs that own these process projects. Learn how to: - lead a process program to deliver strategic outcomes; - understand how the program manages process projects; - reap targeted business benefits by implementing innovative end-to-end process design; - optimise for the whole enterprise, by pursuing cross-functional process design; - access detailed methods and techniques for process program and project leaders - pick the right information technology applications. Don't fall into the trap of thinking that processes are not of interest to you and should be left to operational managers. They're strategically important, and you need to understand modern process innovation to lead your team effectively. Once you take ownership of delivery of business processes, you'll collaborate better with information technology specialists and others in your organisation. The end result will be supportive customers, improved efficiency, better morale, robust profits and growth capacity.

Effective Document and Data Management illustrates the operational and strategic significance of how documents and data are captured, managed and utilized. Without a coherent and consistent approach the efficiency and effectiveness of the organization may be undermined by less poor management and use of its information. The third edition of the book is restructured to take this broader view and to establish an organizational context in which information is management. Along the way Bob Wiggins clarifies the distinction between information management, data management and knowledge management; helps make sense of the concept of an information life cycle to present and describe the processes and techniques of information and data management, storage and retrieval; uses worked examples to illustrate the coordinated application of data and process analysis; and provides guidance on the application of appropriate project management techniques for document and records management projects. The book will benefit a range of organizations and people, from those senior managers who need to develop coherent and consistent business and IT strategies; to information professionals, such as records managers and librarians who will gain an appreciation of the impact of the technology and of how their particular areas of expertise can best be applied; to system designers, developers and implementers and finally to users.
