Nubian Archaeology in the XXIst Century Cornell University Press
Based on the Museum's records of excavations from 1906 to 1934 at the pyramid site of Lisht, revised and augmented by results of recent excavations (1985 to present). Further volumes are in preparation. -- Metropolitan Museum of Art website.

The Russian Primary Chronicle Cambridge University Press
The four-yearly International Conference of the Society for Nubian Studies is currently the most important scientific meeting on the archaeology and the ancient history of Nubia. The 13th session took place in 2014 in Neuchâtel (Switzerland) and its Proceedings contain 95 peer-reviewed papers distributed in 13 chronological or thematic sections, evidencing the breadth of subjects covered: general synthesis, prehistory, protohistory, Egypt, Napata, Meroe, Middle ages, epigraphy and linguistics, cultural heritage, fortifications, bioanthropology, man and animal, survey and fieldwork. The subjects treated are a reflexion of the scientific and cultural heritage issues facing Nubian archaeology, which is one of the most dynamic and innovative of the African continent. It is today confronted with the numerous challenges of the 21st century, which include the coordination between economic development and the protection of the environment and heritage, maintaining and encouraging preventive archaeology, as well as the valorisation of sites in the light of growing public interest.

Reproduction in Education, Society and Culture Metropolitan Museum of Art

In *Black Corona*, Steven Gregory examines political culture and activism in an African-American neighborhood in New York City. Using historical and ethnographic research, he challenges the view that black urban communities are "socially disorganized." Gregory demonstrates instead how working-class and middle-class African Americans construct and negotiate complex and deeply historical political identities and institutions through struggles over the built environment and neighborhood quality of life. With its emphasis on the lived experiences of African Americans, *Black Corona* provides a fresh and innovative contribution to the study of the dynamic interplay of race, class, and space in contemporary urban communities. It questions the accuracy of the widely used trope of the dysfunctional "black ghetto," which, the author asserts, has often been deployed to depoliticize issues of racial and economic inequality in the United States. By contrast, Gregory argues that the urban experience of African Americans is more diverse than is generally acknowledged and that it is only by attending to the history and politics of black identity and community life that we can come to appreciate this complexity. This is the first modern ethnography to focus on black working-class and middle-class life and politics. Unlike books that enumerate the ways in which black communities have been rendered powerless by urban political processes and by changing urban economies, *Black Corona* demonstrates the range of ways in which African Americans continue to organize and struggle for social justice and community empowerment. Although it discusses the experiences of one community, its implications resonate far more widely. Some images inside the book are unavailable due to digital copyright restrictions.

OAR Cumulative Index of Research Results CRC Press
The authors develop an analysis of education. They show how education carries an essentially arbitrary cultural scheme which is actually based on power. More widely, the reproduction of culture through education is shown to play a key part in the reproduction of the whole social system.

A-Z. 1866-70 Orbis Books

The classic work that redefined the sociology of knowledge and has inspired a generation of philosophers and thinkers In this seminal book, Peter L. Berger and Thomas Luckmann examine how knowledge forms and how it is preserved and altered within a society. Unlike earlier theorists and philosophers, Berger and Luckmann go beyond intellectual history and focus on commonsense, everyday knowledge—the proverbs, morals, values, and beliefs shared among ordinary people. When first

published in 1966, this systematic, theoretical treatise introduced the term social construction, effectively creating a new thought and transforming Western philosophy.

Schools of Thought Brazil

In a crucial shift within posthumanistic media studies, Bernhard Siegert dissolves the concept of media into a network of operations that reproduce, displace, process, and reflect the distinctions fundamental for a given culture. Cultural Techniques aims to forget our traditional understanding of media so as to redefine the concept through something more fundamental than the empiricist study of a medium's individual or collective uses or of its cultural semantics or aesthetics. Rather, Siegert seeks to relocate media and culture on a level where the distinctions between object and performance, matter and form, human and nonhuman, sign and channel, the symbolic and the real are still in the process of becoming. The result is to turn ontology into a domain of all that is meant in German by the word Kultur. Cultural techniques comprise not only self-referential symbolic practices like reading, writing, counting, or image-making. The analysis of artifacts as cultural techniques emphasizes their ontological status as "in-betweens," shifting from firstorder to second-order techniques, from the technical to the artistic, from object to sign, from the natural to the cultural, from the operational to the representational. Cultural Techniques ranges from seafaring, drafting, and eating to the production of the sign-signal distinction in old and new media, to the reproduction of anthropological difference, to the study of trompe-l'oeils, grids, registers, and doors. Throughout, Siegert addresses fundamental questions of how ontological distinctions can be replaced by chains of operations that process those alleged ontological distinctions within the ontic. Grounding posthumanist theory both historically and technically, this book opens up a crucial dialogue between new German media theory and American postcybernetic discourses.

Proceedings of the Royal Society of London

Open Road Media
Freshwater Algae: Identification and Use as Bioindicators provides a comprehensive guide to temperate freshwater algae, with additional information on key species in relation to environmental characteristics and implications for aquatic management. The book uniquely combines practical material on techniques and water quality management with basic algal taxonomy and the role of algae as bioindicators. *Freshwater Algae: Identification and Use as Bioindicators* is divided into two parts. Part I describes techniques for the sampling, measuring and observation of algae and then looks at the role of algae as bioindicators and the implications for aquatic management. Part II provides the identification of major genera and 250 important species. Well illustrated with numerous original illustrations and photographs, this reference work is essential reading for all practitioners and researchers concerned with assessing and managing the aquatic environment.

Cumulated Index Medicus Metropolitan Museum of Art

This classic book contains an introduction to systems of l-adic representations, a topic of great importance in number theory and algebraic geometry, as reflected by the spectacular recent developments on the Taniyama-Weil conjecture and Fermat's Last Theorem. The initial chapters are devoted to the Abelian case (complex multiplication), where one

Few themes have been as central to sociology as 'class' and yet class remains a perpetually contested idea. Sociologists disagree not only on how best to define the concept of class but on its general role in social theory and indeed on its continued relevance to the sociological analysis of contemporary society. Some people believe that classes have largely dissolved in contemporary societies; others believe class remains one of the fundamental forms of social inequality and social power. Some see class as a narrow economic phenomenon whilst others adopt an expansive conception that includes cultural dimensions as well as economic conditions. This 2005 book explores the theoretical foundations of six major perspectives of class with each chapter

written by an expert in the field. It concludes with a conceptual map of these alternative approaches by posing the question: 'If class is the answer, what is the question?'

Inventaire des périodiques scientifiques des bibliothèques de Paris: Mon-zym John Wiley & Sons

This authoritative catalogue will greatly assist readers in finding the correct taxonomic name for any given family, genus or species within each of the six arachnid orders treated. It contains a valuable summary of bibliographic information, enabling readers to access the worldwide literature for these smaller orders. The catalogue presents full bibliographic data on each of the taxa named thus far, treating over 1600 species. It contains the most current classification system for each group, some of which have not been catalogued on a world scale for over 70 years. A summary of taxonomic changes is included. This quality reference will be of immense value to arachnologists, systematists, taxonomists, ecologists and biodiversity professionals, especially those interested in tropical rainforest communities.

Obituary notices of deceased fellows were included in v. 7-64; v. 75 is made up of "obituaries of deceased fellows, chiefly for the period 1898-1904, with a general index to previous obituary notices"; the notices have been continued in subsequent volumes as follows: v. 78a, 79b, 80a-b- 86a-b, 87a 88a-b.

The Scepter of Egypt

The transition from the Paleocene to the Eocene Epoch--approximately 55 million years ago--represents a critical moment in the earth's history, when the warmest climatic episode of the Cenozoic era occurred. This sudden global warming resulted in major turnovers among marine and terrestrial organisms. Although this episode has become one of the most popular areas of research in the geologic sciences in the past decade, there has not yet been a work that brings together the profusion of new results in one volume. This book offers by far the most comprehensive source of data on a critically important interval of the earth's history. The editors have brought together the finest scholars working today on the Paleocene-Eocene transition. Covering mammals, reptiles, invertebrates, and plants, as well as the spectrum of marine biotas, the book documents both the well-established and the lesser-known turnovers, such as those of the calcareous nannoplankton and terrestrial mollusks. The volume is also notable for its integration of knowledge culled from a wide variety of disciplines, geographic settings, fossil groups, and paleoenvironments. With 21 contributions and more than 180 illustrations, this book will be of great value as a reference source for a wide spectrum of scientists, from marine geologists and oceanographers to paleontologists, paleoclimatologists, and stratigraphers.

Abelian l-Adic Representations and Elliptic Curves

This monumental reference work treats an entire worldwide order of insects. It summarizes, from both a biological and systematic perspective, current knowledge on the Heteroptera, or true bugs, a group containing approximately 35,000 species, many of which are important to agriculture and public health. To introduce the reader to this group, Randall T. Schuh and James A. Slater offer chapters on the history of the study of the Heteroptera, research techniques, and sources of specimens. They also cover attributes of general biological interest, including habitats, habits, mimicry, and wing polymorphism; selected taxa of economic importance; and basic morphology. Presenting a current classification of the Heteroptera, the authors synthesize to the subfamily and sometimes tribal level the enormous, scattered literature, including diagnoses, keys, general natural history, a summary of distributions, and a listing of important faunistic works. In addition to a wealth of detailed illustrations, they provide a glossary to help the reader deal with the confusing terminology that has evolved over the years, as well as an extensive bibliography of more than 1350 entries. Meticulously prepared by two of the world's leading specialists, this major work will be the standard reference on the Heteroptera for many years to come.
