**Sustainability Marketing** Cambridge University Press

This open access book brings together scholars in the fields of management, public policy, regional studies, and organization theory around the concept of resilience. The aim is to provide a more holistic understanding of the complex phenomenon of resilience from a multi-sectorial, cross-national, and multidisciplinary perspective. The book facilitates a conversation across diverse disciplinary specializations and empirical domains. The authors contribute both to theory testing and theory development and provide key empirical insights useful for societies, organizations, and individuals experiencing disruptive pressures, not least in the context of a post-COVID-19 world. Diverse chapters are held together by a clear organization of the volume across levels of analysis (resilience in organizations and societies) and by an original perspective on resilience derived from an extended review, by the editors, of the existing literature and knowledge gaps, according to which each of the individual chapter contributions is positioned and connected to.

**Group Music Therapy** John Wiley & Sons Ralf Friedrich developed an academically validated and process-oriented maturity model with emphasis on special needs of virtual teams. He provides criteria and indicators of performance for virtual teams and combines different approaches of maturity models into an overall framework to measure and develop virtual team performance. This book describes the development and validation of the Virtual Team Maturity Model (VTMM®) consisting of 11 processes for virtual team collaboration, defined by inputs, methods, outputs and Key Performance Indicators (KPIs) assigned to four maturity levels. The model supports an algorithm for calculating the maturity level of the team based on a set of questionnaires.

Privatization has dominated industrial restructuring programs since the 1980s and continues to do so. This authoritative and accessible Handbook considers all aspects of this key issue, including: the theory of privatization; privatization in transition, developed and developing economies; as well the economic regulation of privatized industries.

**Thrills and Regressions** Palgrave Macmillan

This book applies various theoretical tools to explore the advantages and disadvantages of performance management systems, the ways in which they can be improved, and the strategies through which they can be designed and integrated into the policy making process. By providing both theoretical insights and practical applications, it offers a unique perspective. Using four methods of research that have been rarely applied in the performance management literature: formal (game-theoretical) modelling, operational management, new institutionalism, and cross country statistical comparisons based on international data sets, the book illuminates different aspects of performance management systems in the public sector. It offers an integrative theoretical framework for explaining and designing such systems and their integration into the policy making process, and will open up new avenues of research, expose scholars and students to new methodological tools and equip public officials, politicians and citizens with practical methods for improving the performance of the public sector.

**One Report** Wiley Global Education "One Report" refers to an emerging trend in business taking place throughout the world where companies are going beyond separate reports for financial and nonfinancial (e.g., corporate social responsibility or sustainability) results and integrating both into a single integrated report. *Journey Into Healing* Edward Elgar Publishing

This book compares the trajectories and effects of local public sector reform in Europe and fills a research gap that has existed so far in comparative public administration and local government studies. Based on the results of COST research entitled, 'Local Public Sector Reforms: an International Comparison', this volume takes a European-scale approach, examining local government in 28 countries. Local government has been the most seriously affected by the continuously expanding global financial crisis and austerity policies in some countries, and is experiencing a period of increased reform activity as a result. This book considers both those local governments which have adopted or moved away from New Public Management (NPM) modernization to 'something different' (what some commentators have labelled 'post-NPM'), as well as those which have implemented 'other-than-NPM measures', such as territorial reforms and democratic innovations.

*Managing for Stakeholders: Survival, Reputation, and Success*, the culmination of twenty years of research, interviews, and observations in the workplace, makes a major new contribution to management thinking and practice. Current ways of thinking about business and stakeholder management usually ask the Value Allocation Question: How should we distribute the burdens and benefits of

corporate activities among stakeholders?

*Managing for Stakeholders*, however, helps leaders develop a mindset that instead asks the Value Creation Question: How can we create as much value as possible for all of our stakeholders? Business is about how customers, suppliers, employees, financiers (stockholders, bondholders, banks, etc.), communities, the media, and managers interact and create value. World-renowned management scholar R. Edward Freeman and his coauthors outline ten concrete principles and seven practical techniques for managing stakeholder relationships in order to ensure a firm's survival, reputation, and success.

*Managing for Stakeholders* is a revolutionary book that will change not only how managers do business but also how they recognize and evaluate business opportunities that would otherwise be invisible.

This edited volume provides a comprehensive overview of the diverse and multi-faceted research on governance in multilevel systems. The book features a collection of cutting-edge trans-Atlantic contributions, covering topics such as federalism, decentralization as well as various forms and processes of regionalization and Europeanization. While the field of multilevel governance is comparatively young, research in the subject has also come of age as considerable theoretical, conceptual and empirical advances have been achieved since the first influential works were published in the early noughties. The present volume aims to gauge the state-of-the-art in the different research areas as it brings together a selection of original contributions that are united by a variety of configurations, dynamics and mechanisms related to governing in multilevel systems.

'Perfect health, pure and invincible, is the state we have lost. Regain it, and we regain a world.' In *Journey Into Healing* essential ideas from the work of Deepak Chopra are arranged to create a transcendent experience for the reader, a journey into healing. Along the path, we discover that what we think and feel can actually change our biology. We learn to go beyond self-imposed limitations that create disease, and to seek that place inside ourselves that is at one with the infinite intelligence of the universe, the source of life. By the end of this book, our consciousness will have been altered by the experience of the journey itself. Such change has the power to transform our lives, to grace us with gifts of lasting peace and perfect health. The final pages contain techniques for Mindfulness Meditation, which can access the silent space between our thoughts and tap into the inner wisdom that will make all our dreams come true.

*The New Superleadership* Edward Elgar Publishing

The first course of the International School on Physics with Low Energy Antiprotons was held in Erice, Sicily at the Ettore Majorana Centre for Scientific Culture, from September 26 to October 3, 1986.

The purpose of this School is to review the physics accessible to experiments using low energy antiprotons, in view of the new era of the CERN LEAR ring opened by the upgrade of the antiproton source at CERN (ACOL). In 1986 the first course covered topics related to fundamental symmetries. These Proceedings contain both the tutorial lectures and the various contributions presented during the School by the participants. The contributions have been organized in six sections. The first section is devoted to gravitation, a particularly "hot" topic in view of recent speculations about deviations from

Newton's and Einstein's theories. Section II covers various problems related to the matter-antimatter symmetries such as comparison of the proton and antiproton, inertial masses or spectroscopy of antihydrogen or other antiprotonic atoms. CP and CPT violations in weak interaction are presented in Section III. The test of symmetries in atomic physics experiments and the strong CP problem are covered in Section IV. Section V groups contributions related to high precision measurements of simple systems like protonium, muonium or the anomalous moment of the muon. The last section is devoted to the experimental challenge of polarizing antiproton beams.

**Stakeholder Theory** Berrett-Koehler Publishers

This introduction into comparative public administration provides an in-depth analysis of the state of public administration and recent administrative reforms in European countries. By focusing on the UK, France, Germany, Sweden, Italy and Hungary, it highlights key types of the Anglo-Saxon, Scandinavian, Continental European and Central East European variance of public administration. Its

guiding question is whether and why the politico-administrative systems have shown convergence or divergence.

An easy-to-understand guide for designers on the legal topics that deeply affect their everyday professional activities, *Become a Successful Designer* provides designers with ways to protect and handle their intellectual property rights. Focus groups are all kinds of designers of the product, furniture, interior, fashion, textile, communications, graphics, and computational design areas. The authors Joachim Kobuss, Alexander Bretz and Arian Hassani explain the legal framework and the possibilities to act in that field from a completely new point of view. The law and its effects on the individual designer are described in the context of designers' everyday practice. Here, the legal aspects of design do not appear in incomprehensible legalese but are rather shown as a strategic instrument for designers which can be fun to handle. All topics are discussed from an international and general viewpoint - due to the increasing globalization in the design fields.

Applied Psychology for Project Managers

The patient room is the smallest cell of the hospital organism. Its layout determines the structure of the ward and is therefore a decisive factor for the entire building. Many requirements have to be met. The patient's sense of well-being can be positively influenced by the design: homely materials, an attractive view and sufficient privacy are important objectives. Equally important are the working conditions for the staff, especially short distances and an efficient care routine. Finally, even the risk of infection can be reduced by a conscientiously planned room layout. This publication provides a systematic overview of the design task patient room and shows exemplary solutions: both typologically and in selected case studies.
