Everyone knows there are

no lions in the forests of  
South America . . . or are  
there? Toucan heard it  
first. It was deep. It was  
growly. It was a deep,

growly growl. And that can mean only one thing: THERE'S A LION IN THE FOREST! But how can that be? Everyone knows that lions don't live in tropical forests. But the growls keep coming—and now even Capybara and Coati are anxious, especially when they get a glimpse through the trees of a long, terrifying tail and a thick, menacing mane . . . With a rhythmic text that begs to be read aloud, Mônica Carnesi's clever tale illustrates the importance of not rushing to conclusions. Young

readers will get a kick out of sleuthing along with the forest animals as they try to get to the bottom of this sweetly suspenseful mystery.

The small golden lion tamarin is known for its brownish-red mane, long tail, and territorial nature. Readers will learn about these creatures and how destruction of their coastal forest habitat almost led to their extinction. Find out how zoos and conservationists

have collaborated to save the golden lion tamarin.

"This story, told by a master teller of such things, does more than take you inside the cages, fences, and walls of a zoo. It takes you inside the human heart, and an elephant's, and a primate's, and on and on. Tom French did in this book what he always does. He took real life and wrote it down for us, with eloquence and feeling and aching detail." -Rick Bragg, Pulitzer Prize-winning journalist and bestselling author "An insightful and detailed

look at the complex life of a zoo and its denizens, both animal and human." -Yann Martel, author of Life of Pi and Beatrice and Virgil Welcome to the savage and surprising world of Zoo Story, an unprecedented account of the secret life of a zoo and its inhabitants. Based on six years of research, the book follows a handful of unforgettable characters at Tampa's Lowry Park Zoo: an alpha chimp with a weakness for blondes, a ferocious tiger who revels in Obsession perfume, and a

brilliant but tyrannical CEO known as El Diablo Blanco. The sweeping narrative takes the reader from the African savannah to the forests of Panama and deep into the inner workings of a place some describe as a sanctuary and others condemn as a prison. Zoo Story shows us how these remarkable individuals live, how some die, and what their experiences reveal about the human desire to both exalt and control nature.

Contributors to this work have played major roles in preservation of lion tamarins and other endangered species. They review the history and framework of research and conservation for four species of lion tamarins, and report on studies that have played a part in contributing to the management of the species in captivity and in the wild. They describe direct interventions to conserve wild populations

and their habitats, and look at future directions and challenges in lion tamarin conservation. B & w photos of reintroduction efforts are included.

Wild Life documents a nuanced understanding of the wild versus captive divide in species

conservation. It also documents the emerging understanding that all forms of wild nature—both in situ (on-site) and ex situ (in captivity)—may need to be managed in perpetuity. Providing a unique window into the high-stakes world of nature conservation, Irus Braverman describes the heroic efforts by conservationists to save wild life. Yet in the shadows of such dedication and persistence in saving the life of species, *Wild Life* also finds sacrifice and

death. Such life and death stories outline the modern struggle to define what conservation should look like at a time when the long-established definitions of nature have collapsed. *Wild Life* begins with the plight of a tiny endangered snail, and ends with the rehabilitation of an entire island. Interwoven between its pages are stories about golden lion tamarins in Brazil, black-footed ferrets in the American Plains, Sumatran rhinos in Indonesia, Tasmanian

devils in Australia, and many more creatures both human and nonhuman. Braverman draws on interviews with more than one hundred and twenty conservation biologists, zoologists, zoo professionals, government officials, and wildlife managers to explore the various perspectives on in situ and ex situ conservation and the blurring of the lines between them.

Audisee® eBooks with Audio combine professional narration and sentence highlighting to engage reluctant readers! Golden lion tamarins are found only in Brazilian forests. These small, remarkable monkeys once had plenty of space to roam and claim family territories. But years of deforestation caused their numbers to shrink. They were in serious danger of becoming extinct. To help, scientists studied the animals in zoo settings. But they faced several mysteries. Why weren't

golden lion tamarins reproducing in zoos? If scientists reintroduced zoo-raised tamarins to the wild, would those monkeys survive? And how could scientists give tamarins enough forest area for the population to grow? Find out how scientists and concerned citizens worked together to give golden lion tamarins a hopeful future. *Lives and Works* Joseph Henry Press  
This is... Animals that Live in South America. This book goes from the bottom of Mexico to the

bottom of Argentina showing beautiful colored photos of each animal with the most important or fun fact that is currently known, under each picture. There are animals such as Scarlet Tanager, which has been compared to that of a "robin with a sore throat" to a VERY RARE Golden Lion Tamarin that inhabits the rainforest on the Atlantic coast of Brazil. This is a book that is very basic, with extensive research done to make sure the reader is getting the proper information.

Past progress and future challenges R.J. Wheater

Royal Zoological Society of Scotland, Edinburgh, UK. In the past two

decades much has been achieved in the sphere of

breeding endangered species, and we should be pleased that our cooperative efforts have already borne so much fruit. However, on balance and despite the best efforts of conservationists, the position of wildlife in the wild places where they are best conserved has become worse, often dramatically worse. Before returning to the United Kingdom in 1972, I was in Uganda for 16 years, most of which time was spent as Chief Warden of Murchison Falls National Park. Our main

problem was that an overpopulation of large mammals was having a devastating impact on the habitat. Devastation was being wrought on woodland areas by the arrival of large numbers of elephants into the sanctuary of the Park, following changes in land use in the areas outside the Park. These changes were in response to the requirements of an ever-expanding human population. Gale / Cengage Learning Lion images are everywhere. In literature,

in religion, in statues, emblems and heraldry. Symbols of them are found in all larger European cities -- particularly London. Many are also in Vancouver, British Columbia. A lion image is visually stimulating and should become part of our life. [How Endangered Species Are Being Rescued from the Brink](#) Stanford University Press With only 5,000 surviving, the African wild dog (*Lycaon pictus*) is one of the world's most endangered large

carnivores--and one of the most remarkable. This comprehensive portrait of wild dogs incorporates previously scattered information with important new findings from a six-year study in Tanzania's Selous Game Reserve, Africa's largest protected area. The book emphasizes ecology, concentrating on why wild dogs fare poorly in protected areas that maintain healthy populations of lions, hyenas, or other top carnivores. In addition to conservation issues, it

covers fascinating aspects of wild dog behavior and social evolution. The Creels use demographic, behavioral, endocrine, and genetic approaches to examine how and why nonbreeding pack mates help breeding pairs raise their litters. They also present the largest data set ever collected on mammalian predator-prey interactions and the evolution of cooperative hunting, allowing them to account for wild dogs' prowess as hunters. By using a large sample size and sophisticated

analytical tools, the authors step well beyond previous research. Their results include some surprises that will cause even specialists to rethink certain propositions, such as the idea that wild dogs are unusually vulnerable to infectious disease. Several findings apply broadly to the management of other protected areas. Of clear appeal to ecologists studying predation and cooperation in any population, this book collects and expands a cache of information

useful to anyone studying conservation as well as to amateurs intrigued by the once-maligned but extraordinary wild dog.
