This book focuses on the life and work of Nathan Zuntz (1847-1920), a German physiologist, who made significant contributions to high altitude physiology and aviation medicine. He achieved fame for his invention of the Zuntz-Geppert respiratory apparatus in 1886 and the first treadmill (Laufband) in 1889. He also invented an X-ray apparatus to observe cardiac changes during exercise and constructed a climate chamber to study exercise under varying and sometimes extreme climates. * Focuses on Zuntz's contribution to high altitude physiology and aviation medicine

"Austrian grill master Tom Heinzle knows that when it comes to grilling, there is no off-season. In fact, the blistering charcoal and wafts of hot air that emanate from the grill on a snowy winter's day can be truly exhilarating. Eschewing the usual hamburger/hot dog fare, Winter Grilling features recipes for wild game like boar, hare, turkey and duck, all prepared with unique and festive spices. There are also recipes for seasonal sides and even grilled desserts."--Back cover.

Zoonoses are a persistent threat to the global human health Today, more than 200 diseases occurring in humans and animals are known to be mutually transmitted. Classical infectious diseases, such as rabies, plague, and yellow fever, have not been eradicated despite major efforts. New zoonotic diseases are on the increase due global conditions such as overpopulation, wars, and food scarcity, which facilitate human contact with rodents, stray animals, and their parasites. In addition, humans are unwittingly becoming accidental hosts and new links in an infectious chain by engaging in activities such as survival training, which involves camping in open areas and consumption of raw or insufficiently cooked food. Zoonotic infections cause a variety of symptoms that often do not provide clear evidence of a known disease. Zoonoses, Fourth Edition, describes most occurring worldwide zoonosis and facilitates the identification, diagnosis and treatment of zoonotic infections. Written by a team of doctors, medical microbiologists and veterinarians, this completely, revised edition covers all aspects of the epidemiology and prevention of zoonotic diseases through clear descriptions of various illnesses. Specifically, this fourth edition covers zoonosis caused by viruses, bacteria, fungi and parasites infections caused by animal bites infections and intoxications by animal foods latrogenic transmission of zoonotic pathogens Zoonoses is an indispensable reference for clinicians and laboratorians.

This comprehensive book explains the importance of imaging techniques in exploring and understanding the role of brain abnormalities in schizophrenia. The findings obtained using individual imaging modalities and their biological interpretation are reviewed in detail, and updates are provided on methodology, testable hypotheses, limitations, and new directions for research. The coverage also includes important recent applications of neuroimaging to schizophrenia, for example in relation to non-pharmacological interventions, brain development, genetics, and prediction of treatment response and outcome. Written by world renowned experts in the field, the book will be invaluable to all who wish to learn about the newest and most important developments in neuroimaging research in schizophrenia, how these developments relate to the last 30 years of research, and how they can be leveraged to bring us closer to a cure for this devastating disorder. Neuroimaging in Schizophrenia will assist clinicians in navigating what is an extremely complex field and will be a source of insight and stimulation for researchers.

Die erste Auflage der "DGUV Empfehlungen für arbeitsmedizinische Beratungen und Untersuchungen" ersetzt das bisherige Standardwerk "DGUV Grundsätze für arbeitsmedizinische Untersuchungen". Expertenteams aus Arbeitsmedizinerinnen und Arbeitsmedizinern der betrieblichen Praxis und der Wissenschaft, Fachleuten diverser medizinischer und technischer Fachgebiete sowie der Unfallversicherungsträger haben in enger Abstimmung mit den Sozialpartnern gemeinsam dieses aktuelle Kompendium geschaffen. Mit diesen Empfehlungen steht den Ärztinnen und Ärzten mit betriebsärztlicher Tätigkeit sowie weiteren Akteurinnen und Akteuren in den Betrieben ein praxisnahes Werk für eine standardisierte Umsetzung der arbeitsmedizinischen Vorsorge oder von Eignungsbeurteilungen im Betrieb zur Verfügung. Der Schwerpunkt des Werkes liegt dabei auf der arbeitsmedizinischen Vorsorge. Die Darstellung der Beratung und möglichen Untersuchung nach typischen Expositionen und Belastungen ist neu gegliedert worden. Darüber hinaus werden Hinweise zur Durchführung von Beratungen bzw. Untersuchungen im Rahmen von Eignungsbeurteilungen gegeben. Die einleitenden "Erläuterungen zur Durchführung arbeitsmedizinischer Beratungen und Untersuchungen" sollen helfen, die Inhalte rechtlich korrekt einzuordnen und die Handlungssicherheit der Betriebsärztinnen und Betriebsärzte zu erhöhen.

In der vorliegenden Abhandlung wird die Gründungsgeschichte und das Betätigungsfeld des ersten deutschen luftfahrtmedizinischen Instituts in Hamburg-Eppendorf dargestellt, mit dessen Aufbau in 1927 begonnen wurde. Der Internist und Ärztliche Direktor des Allgemeinen Krankenhauses Eppendorf, Ludolph Brauer (1865-1951), gilt als einer der Wegbereiter der deutschen Luftfahrtmedizin. Nach Jahren der Stagnation nach dem Ersten Weltkrieg war er es, der einen Neuanfang in der Hansestadt machte: Sein der Tuberkulose-Forschungsansalt angegliedertes Institut für medizinische Forschung auf dem Gebiet der Luftfahrt wurde 1927 ins Leben gerufen und nach erfolgtem Ausbau 1931 als selbständiges Institut für Luftfahrtmedizin und Klimafor-schung ins Vereinsregister eingetragen. Im Rahmen der Gleichschaltung wurde das Institut seit 1935 durch das Reichsluftfahrtministerium (RLM) kontrolliert und 1939 als Außenstelle des Berliner Luftfahrtmedizinischen Forschungsinstituts vollends dem RLM unterstellt. Es hatte Bestand bis Februar 1945. Das Kernstück des Institutes bildeten zwei pneumatische Kammern, die zur Behandlung von Lungenerkrankungen sowie für weitere allgemeine medizinische Fragestellungen und Therapiekonzepte genutzt werden konnten; andererseits Verwendung fanden für arbeits-, sport- und höhenphysiologische Untersuchungen. Die Eppendorfer Institution beeinflusste unter ihren drei Leitern die deutsche Luftfahrtmedizin in maßgeblicher Weise, wobei neben höhenphysiologischen Aufgabenstellungen vor allem anwendungsbezogene Fragen untersucht und Fliegertauglichkeits-

untersuchungen durchgeführt wurden.

CDC Yellow Book 2018: Health Information for International Travel John Wiley & Sons

Medical Parasitology is primarily intended to be an illustrated textbook which provides a review of the most important species of parasite which occur in man; their areas of distribution, morphology and development, the typical disease symptoms resulting from infection, epidemiology and also methods of detection and indications for therapy. The main emphasis is on the protozoan and helminthic diseases; medical entomology has only been covered in connection with the epidemiology of the diseases described here. Parasites sometimes occur exclusively in man (anthropoparasites) and sometimes also in animals (anthropozoonotic parasites). The monoxenous species complete their development in man or in one animal alone (Scheme I). Heteroxenous species, which include most of the medically important parasites, develop partly in man and partly in animals in the course of their life cycle. They may even be forced to infect different species so that they can continue their development. This may sometimes be associated with a digenesis, the larval development taking place in one intermediate (Scheme II ®) or in two different intermediate hosts (Scheme III ®, ©), and the sexually mature stage developing in another host, the so-called definitive host (Scheme III ®). The importance of the intermediate hosts can vary considerably (see below).

Health risks are dynamic and ever-changing, both at home and while traveling abroad. To stay abreast of the most up-to-date health recommendations, for decades health care professionals and travelers have relied on the Centers for Disease Control and Prevention's user-friendly Health Information for International Travel (commonly referred to as the The Yellow Book) as a trusted reference. Updated biennially by a team of experts, this book is the only publication for all official government recommendations for international travel. The book's features include clear and easy-to-read disease risk maps, information on where to find health care during travel, specific health information and itineraries for popular tourist destinations, detailed country-specific information for yellow fever and malaria, advice for those traveling with infants and children, and a comprehensive catalog of diseases, their clinical pictures, and their epidemiologies. The Yellow Book addresses the pre-travel consult and provides post-travel clinical guidance on ways to approach common syndromes of returned travelers who are ill.

This book explains how stress – either psychological or physical – can activate and/or paralyse human innate or adaptive immunity. Adequate immunity is crucial for maintaining health, both on Earth and in space. During space flight, human physiology is specifically challenged by complex environmental stressors, which are most pronounced during lunar or interplanetary missions. Adopting an interdisciplinary approach, the book identifies the impact of these stressors – the space exposome – on immunity as a result of (dys-)functions of specific cells, organs and organ networks. These conditions (e.g. gravitation changes, radiation, isolation/confinement) affect immunity, but at the same time provide insights that may help to prevent, diagnose and address immune-related health alterations. Written by experts from academia, space agencies and industry, the book is a valuable resource for professionals, researchers and students in the field of medicine, biology and technology. The chapters “The Impact of Everyday Stressors on the Immune System and Health”, “Stress and Radiation Responsiveness” and “Assessment of Radiosensitivity and Biomonitoring of Exposure to Space Radiation” are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.
