For the last two decades, major Asian economies have successfully kept their economic growth momentum going. Now, as these economies are entering a new phase of economic growth, more attention is being paid to their respective states of

social development, especially the provision and the expansion of social security and, in particular, health care. Academic study of the development of health care in developing countries has been for the most part neglected by the literature, and in-depth country case studies that are directly comparable on a one-to-one basis have not yet been conducted in a systematic manner. This book volume also proposes a new stance on health policy and the

health care policy paradigm, one that focuses on "saving lives" from premature death, as well as illness, accidents, misery and poverty, based on the normative theory of developmental social policy (DSP). This groundbreaking book will therefore serve as a valuable reference volume for health policy, social policy and public policy experts, social development experts, health and development economists, health sociologists, social workers, government

administrators as well as other medical and health professionals and academics.

In her new book, prominent professional developer Yvette Jackson focuses on students' strengths, rather than their weaknesses, to reinvigorate educators to inspire learning and high intellectual performance. Through the lens of educational psychology and historical reforms, Jackson responds to the faltering motivation and confidence of educators in terms of its effects on closing the achievement gap. The author seeks to

rekindle the belief in the vast capacity of underachieving urban students, and offers strategies to help educators inspire intellectual performance. Jackson proposes that a paradigm shift towards a focus on strengths will reinvigorate educators passion for teaching and belief in their ability to raise the intellectual achievement of their students. Jackson addresses how educators can systematically support the development of motivation, reflective

and cognitive skills, and high performance when standards and assessments are predisposed to non-conceptual methods. Furthermore, she examines challenges and offers strategies for dealing with cultural disconnects, the influence of new technologies, and language preferences of students. *Communications* Springer Improving communication is one of the most important - and challenging - issues that management accountants

face. In a global survey of CFOs, Ernst & Young said: "Despite two thirds of respondents saying that increasingly they act as the public face of the organization, most point to communication and influencing as the most important area for improvement." In this publication you will learn: How do management accountants know if they are effectively communicating? What are the most effective techniques for improving their communication skills? This book is

specifically designed to meet the needs and interests of management accountants. It draws on interviews with finance professionals at every level of corporate accounting, as well as with communication consultants, executive recruiters and educators. It looks at how management accountants communicate inside and outside their organizations, identifies best practices, and gives hands-on strategies that accountants can use right away. Readers will

discover how to: Move their current communication skills to a higher level. Recognize the importance of communication within the context of their financial manager function. Understand the right way to deliver bad news and resolve conflicts. Manage the impact of new technologies on traditional communication channels. Develop the skills to use active listening as the foundation for positive communication tactics. **Advances in Artificial**

Shakespeare's intertwined love polygons begin to get complicated from the start--Demetrius and Lysander both want Hermia but she only has eyes for Lysander. Bad news is, Hermia's father wants Demetrius for a son-in-law. On the outside is Helena, whose unreturned love burns hot for Demetrius. Hermia and Lysander plan to flee from the city under cover of darkness but are pursued by an enraged

Demetrius (who is himself pursued by an enraptured Helena). In the forest, unbeknownst to the mortals, Oberon and Titania (King and Queen of the faeries) are having a spat over a servant boy. The plot twists up when Oberon's head mischief-maker, Puck, runs loose with a flower which causes people to fall in love with the first thing they see upon waking. Throw in a group of labourers preparing a play for the Duke's wedding (one of whom is given a donkey's head and Titania

for a lover by Puck) and the complications become fantastically funny. Includes a biography of the author.

The New York Times  
bestseller: "You gotta read this. It is the most exciting book about Pluto you will ever read in your life." —Jon Stewart  
When the Rose Center for Earth and Space at the American Museum of Natural History reclassified Pluto as an icy comet, the New York Times proclaimed on page

one, "Pluto Not a Planet? Only in New York."  
Immediately, the public, professionals, and press were choosing sides over Pluto's planethood. Pluto is entrenched in our cultural and emotional view of the cosmos, and Neil deGrasse Tyson, award-winning author and director of the Rose Center, is on a quest to discover why. He stood at the heart of the controversy over Pluto's demotion, and consequently Plutophiles have freely shared their opinions with him,

including endless hate mail from third-graders. With his inimitable wit, Tyson delivers a minihistory of planets, describes the oversized characters of the people who study them, and recounts how America's favorite planet was ousted from the cosmic hub.

This book is for those who want to learn how to write non-trivial web applications in APEX. It assumes no prior experience with APEX, and only a rudimentary knowledge of SQL and HTML. Other skills (including PL/SQL coding) are taught to the extent needed. Writing an APEX web application is relatively straightforward—you assemble a set of

built-in components for each page (such as regions, items, and processes) and assign property values to them. The property values determine where the component is located on the page, what it looks like, and how it behaves. It's a great idea, and experienced APEX developers can build good looking and highly functional web pages quite rapidly. But the learning curve can be steep. Each component has many properties, and you need to know their

purpose in order to know what values to assign. This book gently guides the reader through this abundance of properties and choices. The goal is to immerse readers in the world of APEX properties, giving them the comfort and fluency with properties that will allow them to think like an APEX developer. Each chapter is devoted to a particular component. It examines the kinds of functionality possible with that component, and shows how to use the component's properties to

implement it. Topics include: conditional formatting, user-customized reports, data entry forms, concurrency and lost updates, and updatable reports. APEX has design wizards and built-in processes to implement many common web idioms. This book examines the techniques used by these wizards and processes, and discusses when to use them and when it makes sense to implement the functionality explicitly. Accompanying the book is a demo web

application that illustrates each mentioned technique. Each page of the application is carefully constructed to illustrate one or more techniques, and provides a concrete example for every concept mentioned in the book. In order to illustrate the tradeoffs between different implementation techniques, some pages implement the same functionality in different ways.

In this report, Cathy Davidson and David Theo Goldberg focus on the potential for shared and

interactive learning made possible by the Internet. They argue that the single most important characteristic of the Internet is its capacity for world-wide community and the limitless exchange of ideas. The Internet brings about a way of learning that is not new or revolutionary but is now the norm for today's graduating high school and college classes. It is for this reason that Davidson and Goldberg call on us to examine potential new models of digital learning

and rethink our virtually enabled and enhanced learning institutions. This report is available in a free digital edition on the MIT Press website at <http://mitpress.mit.edu/9780262513593>.
