Practical data design tips from a data visualization expert of the modern age Data doesn't decrease; it is ever-increasing and can be overwhelming to

organize in a way that makes sense to its intended audience. Wouldn't it be wonderful if we could actually visualize data in such a way that we could maximize its potential and tell a story in a clear, concise manner? Thanks to the creative genius of Nathan Yau, we can. With this full-color book, data visualization guru and author Nathan Yau uses step-by-step tutorials to show you how to visualize and tell stories with data. He explains how to gather, parse, and format data and then design high quality graphics that help you explore and present patterns, outliers, and relationships. Presents a unique approach to visualizing and telling stories with data, from a data visualization

expert and the creator of flowingdata.com, Nathan Yau offers step-by-step tutorials and practical design tips for creating statistical graphics, geographical maps, and information design to find meaning in the numbers. Details tools that can be used to visualize data-native graphics for the Web, such as ActionScript, Flash libraries, PHP, and JavaScript and tools to design graphics for print, such as Adobe Illustrator. Contains numerous examples and descriptions of patterns and outliers and explains how to show them. Visualize This demonstrates how to explain data visually so that you can present your information in a way that is easy to understand and appealing.

Barry C. Lynn, one of America's preeminent thinkers, provides the clearest statement yet on the nature and magnitude of the political and economic dangers posed by America's new monopolies in *Liberty from All Masters*. "Very few thinkers in recent years have done more to shift the debate in Washington than Barry Lynn." —Franklin Foer Americans are obsessed with liberty, mad about liberty. On any day, we can tune into arguments about how much liberty we need to buy a gun or get an abortion, to marry who we want or adopt the gender we feel. We argue endlessly about liberty from regulation and observation by the state, and proudly rebel against the tyranny of course syllabi and Pandora playlists. Redesign the penny today and the motto would read "You ain't

the boss of me." Yet Americans are only now awakening to what is perhaps the gravest domestic threat to our liberties in a century—in the form of an extreme and fast-growing concentration of economic power. Monopolists today control almost every corner of the American economy. The result is not only lower wages and higher prices, hence a concentration of wealth and power in the hands of the few. The result is also a stripping away of our liberty to work how and where we want, to launch and grow the businesses we want, to create the communities and families and lives we want. The rise of online monopolists such as Google and Amazon—designed to gather our most intimate secrets and use them to manipulate our personal and group actions—is making the problem only far worse fast. Not only have these giant corporations captured the ability to manage how we share news and ideas with one another, they increasingly enjoy the power to shape how we move and play and speak and think.

A disruptive technology is a technology or innovation that results in worse product performance different from the expected or predicted performance; an example is that the Internet accessible mobile phone was thought to be a portable substitute for the PC-the actual applications of mobile phones are far different from this Describes business models, user needs, and key technologies to create long-term strategies that are profitable in both the long- and short-term

In *Hacking Happiness*, futurist and contributing Mashable writer John C. Havens introduces you to your "quantified self"—your digital identity represented by gigabytes of data produced from tracking your activities on your smartphone and computer. Harvested by megacorporations such as Google, Facebook, and Amazon, Havens argues that companies gather this data because of its immense economic value, encouraging a culture of "sharing" as they hoard the information based on our lives for private monetary gain. But there's an alternative to this digital dystopia. Emerging technologies will help us reclaim this valuable data for ourselves, so we can directly profit from the insights linked to our quantified selves. At the same time, sensors in smartphones and wearable devices will help us track our emotions to improve our well-being based on the science of positive psychology.

Havens proposes that these trends will lead to new economic policies that redefine the meaning of "wealth," allowing governments to create policy focused on purpose rather than productivity. An issues book highlighting the benefits of an examined life in the digital world, this timely work takes the trepidation out of the technological renaissance and illustrates how the fruits of the Information Age can improve our lives for a happier humanity.

In the Nevada desert, in the near future, a brilliant biologist and single mother named Naomi Chiang sets off a chain reaction that threatens to bring the networked world to its knees. When her seventeen-year-old son, Colt, who spends most of his time in the comfort of virtual reality,

secretly releases her latest findings—a process for regrowing human tissue—Colt's estranged father crashes into their lives again, backed by the secretive security organization he heads. The U.S. government wants Naomi's research . . . and her son, who must leave the virtual sphere to discover the pleasures—and pains—of a life fully lived. Page-turning and thought-provoking, *Connect* is a whip-smart novel that explores what connection—both human and otherwise—might be in a digital age. It is a story of mothers and sons; but it is also about you, your phone, and the world to come.

This Festschrift volume is published in Honor of Yaacov Choueka on the occasion of this 75th birthday. The present three-

volumes *liber amicorum*, several years in gestation, honours this outstanding Israeli computer scientist and is dedicated to him and to his scientific endeavours. Yaacov's research has had a major impact not only within the walls of academia, but also in the daily life of lay users of such technology that originated from his research. An especially amazing aspect of the temporal span of his scholarly work is that half a century after his influential research from the early 1960s, a project in which he is currently involved is proving to be a sensation, as will become apparent from what follows. Yaacov Choueka began his research career in the theory of computer science, dealing with basic questions regarding the relation between mathematical logic and automata theory. From formal languages, Yaacov moved to natural languages. He was a founder of natural-language processing in Israel, developing numerous tools for Hebrew. He is best known for his primary role, together with Aviezri Fraenkel, in the development of the Responsa Project, one of the earliest fulltext retrieval systems in the world. More recently, he has headed the Friedberg Genizah Project, which is

bringing the treasures of the Cairo Genizah into the Digital Age. This first part of the three-volume set covers a range of topics in computer science. The papers are grouped in topical sections on: the jubilaris: Yaacov and his oeuvre; theory of computation; science computing and tools for engineering; information retrieval.
