Winner of the the Susan Elizabeth Abrams Prize in History of Science. When Isaac Newton published the Principia three centuries ago, only a few scholars were capable of understanding his conceptually demanding work. Yet this esoteric knowledge quickly became accessible in the nineteenth and early twentieth centuries when Britain produced many leading mathematical physicists. In this book, Andrew Warwick shows how the education of these "masters of theory" led them to transform our understanding of everything from the flight of a boomerang to the structure of the universe. Warwick focuses on Cambridge University, where many of the best physicists trained. He begins by tracing the dramatic changes in undergraduate education there since the eighteenth century, especially the gradual emergence of the private tutor as the most important teacher of mathematics. Next he explores the material culture of mathematics instruction, showing how the humble pen and paper so crucial to this study transformed everything from classroom teaching to final examinations. Balancing their intense intellectual work with strenuous physical exercise, the students themselves—known as the "Wranglers"—helped foster the competitive spirit that drove them in the classroom and informed the Victorian ideal of a manly student. Finally, by investigating several historical "cases," such as the reception of Albert Einstein's special and general theories of relativity, Warwick shows how the production, transmission, and reception of new knowledge was profoundly shaped by the skills taught to Cambridge undergraduates. Drawing on a wealth of new archival evidence and illustrations, Masters of Theory examines the origins of a cultural tradition within which the complex world of theoretical physics was made commonplace.

The earthing and bonding of an electrical installation is generally considered a complex and sometimes ambiguous subject for many who are involved in electrical facility engineering. For this one day workshop, the IEE Building Electrical Technology Professional Network (BETNET) invited a group of eminent speakers to present the basic concepts and applications necessary for the design

and construction of earthing and bonding networks to meet personnel safety and functional needs (e.g., in hazardous locations or ITE applications) of buildings. This tutorial provides quality information to everyone involved in earthing and bonding design, enabling them to make informed decisions, ensuring installations are safe and reliable. This is a unique course and the only one in it's field to be focussed on this topic. It enables participants to: Identify the correct usage of earthed (or unearthed) systems to prevent electrical shock hazards; Become more familiar with the requirements for earthing and bonding to comply with BS7671: 2001; Specify the correct earthing and bonding requirements for power quality, general safety, hazardous locations and information technology equipment (ITE) applications; Through a number of example cases presented, be able to differentiate 'Clean Earth', 'low noise earth' and 'functional earth' from 'Safety earth?'; and with the aid of a main earthing busbar and appropriate bonding networks, to avoid bad practices of groundloops.

Ramp up the tension and keep your readers hooked! Inside you'll find everything you need to know to spice up your story, move your plot forward, and keep your readers turning pages. Expert thriller author and writing instructor James Scott Bell shows you how to craft scenes, create characters, and develop storylines that harness conflict and suspense to carry your story from the first word to the last. Learn from examples of successful novels and movies as you transform your work from ho-hum to high-tension. • Pack the beginning, middle, and end of your book with the right amount of conflict. • Tap into the suspenseful power of each character's inner conflict. • Build conflict into your story's point of view. • Balance subplots, flashbacks, and backstory to keep your story moving forward. • Maximize the tension in your characters' dialogue. • Amp up the suspense when you revise. Conflict & Suspense offers proven techniques that help you craft fiction your readers won't be able to put down.

To earn a Preparing to Teach in the Lifelong Learning Sector designation, a Certificate in Teaching in the Lifelong Learning Sector, a Diploma in Teaching in the Lifelong Learning Sector, or a Post-Graduate Certificate in Education requires a careful study of theory and practice. Whether you're interested in the PTLLS, CTLLS, DTLLS or PGCE designation, you'll get help preparing assignments and evaluating your progress with this resource. Assignments are focused to cover the full teacher training course with the following modules; -Preparing, Planning, and Developing Effective Teaching, Learning and Assessment; -Personal Development and Professional Practice; -Theories and Practice of Teaching and Learning; -Personal Development and Professional Practice; -Evaluating the Learner Experience; -Access, Progression, and Achievement. Throughout, the author argues that people are not born to teach-they are trained to teach.

Electrotechnology Practice is a practical text that accompanies Hampson/Hanssen's theoretical Electrical Trade Principles. It covers essential units of competencies in the two key qualifications in the UEE Electrotechnology Training Package: - Certificate II in Electrotechnology (Career Start) - Certificate III in Electrotechnology Electrician Aligned with the latest Australian and New Zealand standards, the text references the Wiring Rules (AS/NZS 3000:2018) and follows the uniform structure and system of delivery as recommended by the nationally accredited vocational education and training authorities. More than 1000 illustrations convey to the learner various concepts and real-world aspects of electrical practices, a range of fully worked examples and review questions support student learning, while assessment-style worksheets support the volume of assessment. Electrotechnology Practice has strong coverage of the electives for Cert II and Cert III, preparing students to eligibly sit for the Capstone Assessment or the Licenced Electrician's Assessment (LEA). as a mandatory requirement to earn an Electrician's Licence. Premium online teaching and learning tools are available on the MindTap platform.

Marine Engineering Series: Marine Control Practice deals with the instrumentation and its associated control systems that are found onboard ships. The book covers topics such as the measuring instruments and control signals for different parameters; system analysis; process and kinetic control systems; and commercially available equipment. Also covered in the book are correcting units such as actuators and valves; the control systems for boilers, turbines, auxiliary equipment; and control involving computers. The text is recommended for those who need to complete the Certificates of Competency for Marine Engineers, including Extra First Class. The book will also be beneficial to offshore engineers.

The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals (Einstein), institutions and disciplines (Mathematics), general themes (Romantic Science) and central concepts (Paradigm and Fact). The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn.
