The debate on literature and the arts provoked by the Italian neoavant-garde (neoavanguardia) is undoubtedly one of the most animated and controversial the country has witnessed from World War II to the present. Comprising the period between the late 1950s and the late 1960s, the phenomenon of the neoavanguardia involved key writers, critics, and artists, both as insiders - Sanguineti, Balestrini, Guglielmi, Eco, and others - and adversaries such as Pasolini, Calvino, and Moravia. In *The New Avant-Garde in Italy* - the first book in English to document the movement - John Picchione's objective is twofold: to provide a comprehensive analysis of the theoretical tenets that inform the works of the neoavanguardia and to show how they are applied to the poetic practices of its authors. The neoavanguardia cannot, Picchione argues, be defined as a movement with a unified program expressed in the form of manifestos or shared theoretical principles. It experiences irreconcilable internal conflicts that are explored as a split between two main blocs - one that is tied to the project of modernity, the other to post-modern aesthetic postures. This study suggests that some of the contentious views proposed by the neoavanguardia anticipated a wide range of issues that continue to be significant and pressing to this day.

Brain research is much in the news, but what is its relevance in the classroom? Are there ways to take what brain researchers are discovering about learning and memory and apply it to the situations that educators face every day? Practicing teacher and author Marilee Sprenger tells how to do just that in this book. Sprenger has spent years studying neurological research and training other educators in brain-compatible teaching methods. This background, combined with her long career as a classroom teacher, has given her priceless knowledge of what works in a multitude of classroom situations. Current brain research is as amazing as it can be confusing. This book discusses in plain terms the structure, function, and development of the human brain. The author describes the five "memory lanes"--semantic, episodic, procedural, automatic, and emotional--and tells how they function in learning and memory. She offers dozens of practical suggestions for teaching and assessing in brain-compatible ways. Bridging the gap between theory and practice, the book offers valid, usable, "What you can do on Monday" ideas to incorporate into the classroom. This is an approach to brain research that educators at all levels can apply in their daily work.
