An authorised reissue of

the long out of print

classic textbook,

Advanced Calculus by the

late Dr Lynn Loomis and

Dr Shlomo Sternberg both

of Harvard University has

been a revered but hard

to find textbook for the

advanced calculus course

for decades. This book is

based on an honors

course in advanced

calculus that the authors

gave in the 1960's. The

foundational material,

presented in the

unstarred sections of

Chapters 1 through 11,

was normally covered, but

different applications of

this basic material were

stressed from year to

year, and the book

therefore contains more

material than was

covered in any one year.

It can accordingly be used

(with omissions) as a text

for a year's course in

advanced calculus, or as a

text for a three-semester

introduction to analysis.

The prerequisites are a

good grounding in the

calculus of one variable

from a mathematically

rigorous point of view,

together with some

acquaintance with linear

algebra. The reader

should be familiar with

limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.

The Nordic countries have collaborated in setting guidelines for dietary composition and recommended intakes of nutrients for several decades through the joint publication of the Nordic Nutrition Recommendations (NNR). This 5th edition, the NNR 2012, gives Dietary Reference Values (DRVs) for nutrients, and compared with earlier editions more emphasis has been put on evaluating the scientific evidence for the role of food and food patterns contributing to the prevention of the major

diet-related chronic diseases. Recommendations on physical activity are included and interaction with physical activity has been taken into account for the individual nutrient recommendations wherever appropriate. A chapter on sustainable food consumption has been added. A Nordic perspective has been accounted for in setting the reference values. The NNR 2012 has used an evidence-based and transparent approach in assessing associations between nutrients and foods and certain health outcomes. Systematic reviews form the basis for the recommendations of several nutrients and topics, while a less stringent update has been done for others. The systematic reviews and individual chapters have been peer reviewed and the systematic reviews are published in the *Food & Nutrition Research* journal. The draft chapters were subject to an open public consultation. Recommendations have been changed only when sufficient scientific evidence has evolved since the 4th edition. The primary aim of the NNR 2012 is to present the scientific background of

the recommendations and their application. A secondary aim is for the NNR 2012 to function as a basis for the national recommendations that are adopted by the individual

Over the past 20 years, public concerns have grown in response to the apparent rising prevalence of food allergy and related atopic conditions, such as eczema. Although evidence on the true prevalence of food allergy is complicated by insufficient or inconsistent data and studies with variable methodologies, many health care experts who care for patients agree that a real increase in food allergy has occurred and that it is unlikely to be due simply to an increase in awareness and better tools for diagnosis. Many stakeholders are

concerned about these increases, including the general public, policy makers, regulatory agencies, the food industry, scientists, clinicians, and especially families of children and young people suffering from food allergy. At the present time, however, despite a mounting body of data on the prevalence, health consequences, and associated costs of food allergy, this chronic disease has not garnered the level of societal attention that it warrants. Moreover, for patients and families at risk, recommendations and guidelines have not been clear about preventing exposure or the onset of reactions or for managing this disease. Finding a Path to Safety in Food Allergy examines critical issues related to food allergy, including the prevalence and severity of food allergy and its impact on affected individuals, families, and communities; and current understanding of food allergy as a disease, and in diagnostics, treatments, prevention, and public policy. This report seeks to: clarify the nature of the disease, its causes, and its current management; highlight gaps in knowledge;

encourage the implementation of management tools at many levels and among many stakeholders; and delineate a roadmap to safety for those who have, or are at risk of developing, food allergy, as well as for others in society who are responsible for public health.

The Federal Guidelines for Opioid Treatment Programs (Guidelines) describe the Substance Abuse and Mental Health Services Administration's (SAMHSA) expectation of how the federal opioid treatment standards found in Title 42 of the Code of Federal Regulations Part 8 (42 CFR 8) are to be satisfied by opioid treatment programs (OTPs). Under these federal regulations, OTPs are required to have current valid accreditation status, SAMHSA certification, and Drug Enforcement Administration (DEA) registration before they are able to administer or dispense opioid drugs for the treatment of opioid addiction.

 In down-to-earth language with a hearty helping of humor, Glen Merzer uses personal experience, real-life stories, and case studies to illustrate what science has repeatedly confirmed: plant-based diets prevent chronic disease. With clarity and humor, he presents a convincing case for how a plant-based diet can help us take charge of our health and avoid doctors, hospitals, and medicine. From the overall lack of nutritional knowledge among western health-care providers to the impact of animal farming on climate change to how our bodies are physiologically designed for plant foods, Merzer leaves no stone unturned. As part of his mission to advocate healthy eating over Medicare for all, Merzer enlisted Chef AJ to contribute more than 75 recipes--all free of oil, sugar, flour, gluten, and salt-- that are distinctively delicious, nutritious, and easy to make. A bonus section of 35 additional recipes from bloggers and YouTube chefs provides further opportunities to savor the goodness and flavor that real food delivers.
