The Tenth American Peptide Symposium was held on the campus of Washington University in St. Louis, Missouri, on May 23-28, 1987. More than 750 participants from around the world met to renew acquaintances, make new friends, and feast at the scientific explosion occurring in the field of peptide research. From over 85 oral presentations and 295 poster presentations, the manuscripts which make up this proceedings have been selected in order to present a synopsis of current research. In many ways, this meeting represented a culmination of forces clearly perceptible in the proceedings of previous meetings in which synthetic chemistry, spectroscopy, molecular biology,

molecular modeling, and protein chemistry all are blended as needed to focus on interesting scientific problems. As peptides assume an ever increasingly important role in biological phenomena, our domain as peptide chemists has obviously expanded, and we are the richer for it. The session on conformation was highlighted by both predictions of three-dimensional structures of proteins (i. e. , interleukin and human growth hormone) as well as determination of solution structures by 2D NMR. A growing interest in peptide mimetics stimulated much interest in reverse turn mimics, nonpeptide antagonists of peptide hormones, and amide bond isosteres. Increased use of unusual amino acids created strong interest in approaches to asymmetric

syntheses of amino acids and methodological improvements in peptide synthesis as well as recent advances in purification and characterization methods.

Because of the ubiquitous nature of environmental problems, a variety of scientific disciplines are involved in the development of environmental solutions. The Handbook of Chemical and Environmental Engineering Calculations provides approximately 600 real-world, practical solutions to environmental problems that involve chemical engineering, enabling engineers and applied scientists to meet the professional challenges they face day-to-day. The scientific and mathematical crossover between chemical and environmental engineering is the key to solving a host of environmental problems. Many problems included in the Handbook are intended to

demonstrate this crossover, as well as the integration of engineering with current regulations and environmental media such as air, soil, and water. Solutions to the problems are presented in a programmed instructional format. Each problem contains a title, problem statement, data, and solution, with the more difficult problems located near the end of each problem set. The Handbook offers material not only to individuals with limited technical background but also to those with extensive industrial experience. Chapter titles include: Chemical Engineering Fundamentals Chemical Engineering Principles Air Pollution Control Equipment Solid Waste Water Quality and Wastewater Treatment Pollution Prevention Health, Safety, and Accident Management Ideal

for students at the graduate and undergraduate levels, the Handbook of Chemical and Environmental Engineering Calculations is also a comprehensive reference for all plant and environmental engineers, particularly those who work with air, drinking water, wastewater, hazardous materials, and solid waste.

The idea for an international symposium on regulated streams was conceived over an open-faced sandwich at the R&dhus in Copenhagen when we attended the Congress of the Societas Internationalis Lim nologiae in summer 1977. Although we were aware that various colleagues were working on ecological problems in reservoir tailwaters, we did not fully comprehend

the magnitude of worldwide stream regulation nor the extent of interest in the subject. Such revelations are reflected in the 21 papers included in this book. The authors have summarized current understanding of the ecology of regulated streams and attempted to convey the importance and direction of future scientific investigations in stream ecosystems altered by upstream impoundments. The First International Symposium on Regulated Streams was the plenary event at the 27th annual meeting of the North American Benthological Society, April 18-20, 1979, in Erie, Pennsylvania. More than 500 colleagues attended. We gratefully acknowledge the support granted by the National Science Foundation; these funds permitted intellectual exchange

between scientists from eight countries on four continents. We extend personal thanks to Dr. K. W. Stewart, President of NABS, and the NABS Program Committee, including Drs. E. C. Masteller, E. R. Brezina, and W. P. Kovalak. These individuals and other officers and members of the Executive Committee assisted us with the many details leading to organization and staging of a scientific forum. Discussions with Dr. John Cairns, Jr. and Dr. G. Richard Marzolf during the early planning stage were most helpful.

Finding and retaining talented employees is critical to every organization's success. But, do you have an effective process for managing employee performance? Are strategic initiatives being met or even tracked? If you're an SAP HCM professional, analyst, or consultant interested in managing employee performance, this indispensable book will help answer these questions. Using the practical information and best practices provided, you'll discover new methods for process improvement, and you'll find detailed guidance on designing, building, and deploying an effective strategy. The

book is composed of two parts: "Overview and Process" and "System Functionality and Implementation", which provides both functional and technical insight based on real-world implementation experience. Special attention is given to explaining the common deployment pain points and the mitigation steps to alleviate these issues. The book covers the latest releases, including the R/3 Enterprise Release (4.7), SAP ERP 2004 (ECC 5.0), and SAP ERP 2005 (ECC 6.0). Highlights Include: Corporate Strategy Goals versus Objectives Development Planning Objective Setting and Appraisal (OSA) module Appraisal Catalog (Transaction PHAP_CATALOG) Security Authorizations Business Add-Ins (BAIs) Reporting & Business Intelligence SAP Netweaver

Real Teams Win Legare Street Press Highly respected Silicon Valley turn-around expert Thomas L. Steding presents his proven leadership process for achieving peak performance by accessing the untapped/unseen intelligence of deep imagination as well as the superior creativity and intelligence of the connected team. Thomas Steding has seen first-hand that

the leadership skills that can take an organization from poor to peak performance and outdistancing its competition were not taught in business schools or management seminars or even a part of the leadership conversation. *Real Teams Win* is the culmination of Steding's four decades of high-impact methods that offer real change from within the organization with real results that work really fast.

HR Personnel Planning and Development Using SAP Childrens Defense Fund This book is a review and description of the state-of-the-art methods of tree-ring analysis with specific emphasis on applications in the environmental sciences. Traditionally, methods of tree-ring analysis, or more properly in this case methods of dendrochronology,

were developed and used for dating archaeological and historical structures and for reconstructing past climates. The classic book *Tree Rings and Climate*, by H.C. Fritts, published in 1976, provided a superb introduction to the science and an in-depth description of techniques useful for extracting climatic information from tree rings. This book, which was published by Academic Press, is sadly out of print and, even though only 12 years old, limited in its methods and applications. This is owing to the extremely rapid development of the science since the 1970s. Only recently have tree rings as environmental sensors been fully recognized as a valuable tool in detecting environmental change. For example, tree ring measurements have been critically

important in studies of forest decline in Europe and North America. There are also attempts to use tree-ring analysis for ecological prognosis to solve large-scale regional problems including the sustain ability of water supplies, prediction of agricultural crops, and adoption of silvi cultural measures in response to ecological changes. More speculatively, dendro chronological methods are also used for dating and evaluating some astrophysical phenomena and for indicating possible increase in the biospheric carrying capacity due to increased atmospheric carbon dioxide.

Children living in poverty are more likely to have mental health problems, and

their conditions are more likely to be severe. Of the approximately 1.3 million children who were recipients of Supplemental Security Income (SSI) disability benefits in 2013, about 50% were disabled primarily due to a mental disorder. An increase in the number of children who are recipients of SSI benefits due to mental disorders has been observed through several decades of the program beginning in 1985 and continuing through 2010. Nevertheless, less than 1% of children in the United States are recipients of SSI disability benefits for a mental disorder. At the request of the Social Security Administration, *Mental Disorders and Disability Among Low-Income Children* compares national trends in the number of children with mental disorders with

the trends in the number of children receiving benefits from the SSI program, and describes the possible factors that may contribute to any differences between the two groups. This report provides an overview of the current status of the diagnosis and treatment of mental disorders, and the levels of impairment in the U.S. population under age 18. The report focuses on 6 mental disorders, chosen due to their prevalence and the severity of disability attributed to those disorders within the SSI disability program: attention-deficit/hyperactivity disorder, oppositional defiant disorder/conduct disorder, autism spectrum disorder, intellectual disability, learning disabilities, and mood disorders. While this report is not a comprehensive

discussion of these disorders, *Mental Disorders and Disability Among Low-Income Children* provides the best currently available information regarding demographics, diagnosis, treatment, and expectations for the disorder time course - both the natural course and under treatment.
